DETAILED ACTION

Respond to Preliminary Amendment

1. This office action is in response to the preliminary amendment file on 2/13/04.
 - Claims 1-25 have been cancelled.
 - Claims 26-29 are newly added.
 - Claims 26-29 are pending in the application.

Drawings

2. Figure 3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed.

Art Unit: 2818

Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 26-29 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 8-10 of U.S. Patent No. 6,754,132. Although the conflicting claims are not identical, they are not patentably distinct from each other because the elements recited in claims 26-29 of the present application are art recognized equivalent with claims 8-10 of U.S. Patent No. 6,754,132.

With regard to claims 26-29, the present application recited an active termination circuit comprising termination resistor, control circuit include synchronously and asynchronous signals, which is a mere broader version of the active termination disclose in claims 8-10 of U.S. Patent No. 6,754,132. The purpose of the invention is to provide a high speed, reliable and low power consumption semiconductor memory device.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Kitazaki (6,172,936) discloses a memory device capable of being switched between asynchronous read operations and clock-synchronous read operation.
